

Coding Test (1 hour)

I. HTML, CSS and Javascript (50 marks)

II.

Design a user registration form screen for validating user details, accept user first name, user last name, email Id, mobile number, username and password along with two buttons such as register and reset .

Following are the client-side validations to be performed using javascript

1. First and last name user should not enter more than 50 characters and no special characters are excepted
2. Mobile number should not be less than or greater than 10 digits
3. Email id should be in proper format
4. Username has to be only alphabets and minimum 5 characters
5. Password should be at least 8 characters, minimum 1 digit and minimum 1 special character
6. Register and Reset Button must be present. On click of register button validation must take place and on click of reset form data should get cleared.

The Registration screen is designed for Sapient Order Management System web application to run on various browsers.

Design responsive page by applying external styling and include bootstrap libraries if required.
